

STRENGTHEN YOUR STRUCTURE

Metro Truck & Trailer Maintenance Facility

Project Description

This design-build, two-story steel frame facility represents the latest service capabilities in the semi-tractor trailer maintenance field. The site's truck parking lot and driveways were constructed from concrete because the owner preferred concrete's longevity, look, and resistance to cracking as compared to asphalt.

The in-ground pits prevented the team from using the floor slab as a tilt wall casting bed. The decision was made to use the paving as the casting beds because it was an all concrete site. This solution allowed the team to maintain an extremely tight schedule.

Owner	Buske Lines, Inc.
Architect	Forum Studio, Inc.
Engineers	Alper Audi Inc. Stock & Associates
General Contractor	Clayco
Ready Mix Supplier	Kienstra Inc.
Subcontractor	Concrete Strategies Contracting Company Wright Industrial
