

FOR GOOD ROADS: COUNT ON CONCRETE

Residential Pervious Driveway St. Louis, MO

PROJECT SUMMARY:

As a result of the Concrete Council's sponsoring the NRMCA Pervious Concrete Contractor Certification program this residential driveway is one of the first in the area to use pervious concrete. The homeowner is an architect who attended the NRMCA Pervious Certification in August 2008 and in addition to promoting the use of pervious concrete systems for stormwater management on his projects at work, he was interested in using pervious concrete for his own driveway. The Concrete Council consulted with the homeowner and supplied a list of our member contractors with NRMCA Pervious Certification. The project used 12.5 Cubic Yards of pervious concrete and was completed in early December.

PROJECT TEAM:

Contractor: Hoette Concrete
Construction Co., Inc.

Ready Mix: Landvatter Ready Mix Inc.

Approx. Cubic Yards: 12.5 yd³
