

STRENGTHEN YOUR STRUCTURE

West Park II

Fast Cash Flow

A time efficient cast-in-place concrete system was used throughout West Park II, allowing the building to be completed in only 11 months. The main entrance for the six-story building, which contains approximately 134,500 square-feet, is flanked by four-story columns sheathed in aluminum. The benefits of using concrete were many, including:

- Quicker startup
- Fewer materials
- Shorter start-to-finish time
- More marketable space
- Greater fire resistance
- Favorable cash flow

Strengthen your structures through the use of structural concrete.
